

Assessment 3

Q 1. What property do the shapes in Column A have that those in Column B do not? The first one has been done for you.

Column A (These shapes have the property)	Column B (These shapes don't have the property)	Property
		<i>Shape has exactly 3 sides.</i>
		
		
		

Q 2. What type of quadrilateral is shown below? List any 3 of its properties.

i. _____

ii. _____

iii. _____

Q 3. Look at the shapes given below.

I

II

III

IV

- i. What is common between shapes I and II and what is the difference between them?
- ii. What is common between shapes II and IV and what is the difference between them?
- iii. What property is common to all 4 shapes? Write as many as you can.

Q 4. Which of these names would fit ALL the shapes given below?

- A. rectangle
- B. parallelogram
- C. quadrilateral
- D. none of these names fit *all* the shapes

Q 5. Shown below is a set of shapes. If this was a class of shapes, which of the given statements could be used to define this 'class'?

A polygon with

- A. exactly 3 sides, exactly 1 pair of sides parallel.
- B. exactly 3 sides, exactly 1 pair of sides equal.
- C. at least 3 sides, exactly 1 pair of sides parallel.
- D. at least 3 sides, exactly 1 pair of sides equal.

Q 6. Let's define a set of shapes called 'Parallelocurve' that have the following properties:

- i. at least one curved side
- ii. exactly 1 pair of parallel sides
- iii. at least one right angle

Draw 2 shapes that are both 'Parallelocurves'.

1	2
---	---

Q 7. Which of the following CANNOT be drawn?

- A. A rhombus with all angles right angles.
- B. A parallelogram with only one pair of equal sides.
- C. A quadrilateral with exactly one pair of adjacent sides equal.
- D. A quadrilateral with one pair of sides parallel and the other pair of sides equal.
